SUMMARY

Third-year Software Engineering undergraduate at the University of Kelaniya with hands-on experience in backend development, RESTful API design, and full-stack application development using Spring Boot and MERN stack. Strong understanding of Object-Oriented Programming (OOP) principles and microservice-based system design. Experienced in collaborating on academic projects using Git-based workflows and agile development practices.

EDUCATION

B.Sc.(Hons.) Software Engineering April 2024 – Present
University of Kelaniya Kelaniya, Sri Lanka

- CGPA : 3.63
- Specializing in Net-Centric Applications, Data Science Engineering Applications, Health Informatic Applications and Game Development Applications domains.

G.C.E. Advanced Level March 2021 – January 2023
Sir John Kothalawala College Kurunegala, Sri Lanka

- Z-Score : 1.6096

PROJECTS

Friutflow Individual April 2026 – Present **GITHUB REPO**

- Engineered a full-stack MERN-based eCommerce platform with 10+ RESTful APIs
- Designed 15+ responsive React.js components using Tailwind CSS
- Integrated secure JWT authentication and role-based authorization workflows
- Built product browsing, filtering, cart, and order management systems
- Containerized application services using Docker Compose for scalable deployment
- Integrated centralized API communication between frontend and backend systems
- Individually managed full-stack architecture, development, and deployment workflows

Keywords: eCommerce, Authentication, Admin Dashboard, Payments
Technologies: MERN, Tailwind CSS, JWT, Docker

FGhub Individual April 2026 – Present **GITHUB REPO**

- Created a full-stack movie and gaming platform using React.js and Spring Boot
- Architected a scalable microservice-based backend with secure JWT authentication
- Developed a rating and review system supporting 100+ media records
- Designed 12+ responsive UI components for browsing and user interaction
- Integrated AI-powered recommendation features and 8+ RESTful APIs
- Utilized MongoDB and Docker for scalable data management and deployment

Keywords: Microservice, Authentication, Dynamic Rating System, AI-based assistant
Technologies: Spring Boot, React.js, Rest API, MongoDB, Docker

---

TaskPRO Individual August 2026 – Present **GITHUB REPO**

- Developing an enterprise-grade task management platform using ASP.NET Core 8 Web API and React
- Architected a Clean Architecture solution with Domain, Application, Infrastructure, and API layers
- Configured Entity Framework Core with PostgreSQL and designed a normalized relational database schema
- Implementing JWT authentication, refresh tokens, and role-based authorization for secure access control
- Building project, task, team collaboration, and real-time notification modules using SignalR

- Applying enterprise development practices including dependency injection, FluentValidation, AutoMapper, and Serilog
- Following Git-based feature branching and modular development with comprehensive RESTful API design

Keywords: Task Management, Project Management, Clean Architecture, Real-Time Collaboration
Technologies: ASP.NET Core 8, C#, React, PostgreSQL, Entity Framework Core, JWT, SignalR, Tailwind CSS

RomoChat Individual — June 2026 – Present — **GITHUB REPO**

- Engineered a full-stack real-time messaging application using a microservices architecture with separate Gateway, Auth, User, Chat, and Realtime services
- Developed 20+ RESTful APIs for user authentication, profile management, conversations, and messaging workflows
- Implemented secure JWT-based authentication, API Gateway routing, and rate limiting for scalable service communication
- Built real-time messaging features using Socket.IO, including conversation rooms, online presence, typing indicators, read receipts, and message delivery status
- Designed a modern, responsive React.js user interface with conversation management, chat window, and real-time updates
- Structured the application with a scalable feature-based frontend architecture and service-oriented backend for maintainability and future expansion
- Independently designed, developed, integrated, and tested the complete frontend, backend, and realtime communication system

Keywords: Real-Time Messaging, Microservices, Socket.IO, API Gateway, Authentication, Chat Application
Technologies: React.js, Vite, Express.js, MongoDB, Socket.IO, JWT, Tailwind CSS, Node.js

---

SA Project V1 Academic Group — February 2026 – Present — **GITHUB REPO**

- Engineered a full-stack stall reservation and event management platform using React.js and Spring Boot
- Built interactive floor layout and intelligent stall pricing modules for vendor management
- Built secure QR-code-based entry validation and booking workflows
- Designed analytics dashboards for revenue tracking and booking monitoring
- Applied role-based authentication and authorization for admins, vendors, and employees
- Collaborated within a team-based academic project using Git version control workflows

Keywords: Real Time Tracking, Authentication & Authorization, Payment Tracking
Technologies: React, Tailwind, Spring Boot 3, PostgreSQL, JWT

SKILLS

Frontend: React, JavaScript, HTML5, CSS, Tailwind CSS
Backend: Spring Boot, Express.js, Node.js, Java, PHP, C, C#
Database: MongoDB, MySQL, Postgresql
Tools: Git, Docker, JIRA, Figma, Adobe Photoshop, Unity, Unreal, Postman

CERTIFICATIONS

- ReactJS for beginners – Simpleilearn
- Programming with JavaScript – coursera/meta
- Deliver with DevOps – Microsoft
- Describe security and compliance concepts – Microsoft

LANGUAGES

- English (Professional Proficiency)
- Sinhala (Native)
